1. Hadda Chart

Rasis from Mesha numbered from 1 to 12

Hadda Lords with Ranges in Degrees

1	2	3	4	5	6	7	8	9	10	11	12
GR-6	SK-8	BD-6	KJ-7	GR-6	BD-7	SN-6	KJ-7	GR-12	BD-7	SK-7	SK-12
SK-6	BD-6	SK-6	SK-6	SK-5	SK-10	BD-8	SK-4	SK-5	GR-7	BD-6	GR-4
BD-8	GR-8	GR-5	BD-6	SN-7	GR-4	GR-7	BD-8	BD-4	SK-8	GR-7	BD-3
KJ-5	SN-5	KJ-7	GR-7	BD-6	KJ-7	SK-7	GR-5	KJ-5	SN-4	KJ-5	KJ-9
SN-5	KJ-3	SN-6	SN-4	KJ-6	SN-2	KJ-2	SN-6	SN-4	KJ-4	SN-5	SN-2

Note : Sun, Moon, Rahu and Ketu have no Hadda Lordship

2. Thrirasi Chart

Rasis from Mesha numbered from 1 to12

Lords of Divisons

1	2	3	4	5	6	7	8	9	10	11	12
KJ	BD	GR	SK	SN	RV	CH	KJ	BD	GR	SK	SN
RV	CH	KJ	BD	GR	SK	SN	RV	CH	KJ	BD	GR
SK	SN	RV	CH	KJ	BD	GR	SK	SN	RV	CH	KJ

Note : Starting with Kuja it runs in continuous weekday order till the end.

3. Thrirasi Chart (To determine Year Lord)

Rasis from Mesha to Meena

	1	2	3	4	5	6	7	8	9	10	11	12
Day	RV	SK	SN	SK	GR	CH	BD	KJ	SN	KJ	GR	CH
Night	GR	CH	BD	KJ	RV	SK	SN	KJ	SN	KJ	GR	CH

the Hadda lord of a planet at 15° of Vrischika (8th Rasi from Mesha). Under Col. 8 the first 7° of Vrischika are ruled by Kuja, from 8 to 11 by Shukra and from 12 to 19 by Budha. So the 15° of Vrischika is ruled by Budha who becomes the Hadda Lord.

Chart-2 : To find the Thrirasi of the above planet under Col. 8 the first 10° are ruled by Kuja and the next from 10 to 20 by Sun. So, 15th degree of Vrischika is ruled by Sun as Thrirasipa. In this chart there are three equal divisions for each of 10° span.

Chart-3 : (Thrirasi) This is meant to determine the lord of the Year. This chart is self-explanatory. For signs happening to be Birthday Lagnas during Day and Night times find out from the particular square. For example if the Solar year Birth falls in Vrischika Lagna and during night time look to the square between Col. 8 and Row 2 (Night). You get Kuja as Thrirasipa one of the *Panchadhikaris.*

The other charts are self-explanatory.

Evaluation of Five-fold Strength

In Table 6 the strengths of planets in Rasi, Hadda, Thrirasi and Navamsha are given according as they are in Own house, Friend's house, Neutral's house and Enemy's house. So we must know who are friends etc. In Tajak friendship etc. of planets are judged by a different canon. It is more or less the same as treated in Western Astrology. Planets that are in : 3, 5, 9 and 11 from another are friends. Among them those in 3 and 11 are secret friends while in 5 and 9 are open friends.

1, 4, 7 and 10 are enemies. Among them those in 1 and 7 are open enemies while in 4 and 10 secret enemies; 2, 12, 6 and 8 are neutrals.

On this basis find the four-fold strength in Rupas as per Table 6. To this add Ucchabala (Exaltation strength). How to measure this ? At highest exaltation point, its strength is 20 Rupas and at its opposite end (Debilitation) it is zero. For the intermediary positions find out by Rule of Three. If you divide the number of degrees advanced or receded by the Debilitation point by 9 you get the strength in Rupas. Add this fifth strength to the above four and divide the sum by 4 you get its Vimshopaka Balam - its maximum being 20 Rupas. Now you may judge the strength of a planet on this maximum measurement.

One aspect that I wish to point out here is about the superiority of 'Hadda Chart'. Its strength is assigned next to Rasi strength. Here you will please note that a planet in its own Hadda attains superior strength and gives out its good effects during its Dasha in the year.

Varshapravesh

Just as there is a day and moment of birth of a new year for the world, called Ugadi or the New Year Day, there is a similar moment of a new year dawning in the life of an individual and that is usually called his Birthday. Though one's Birthday celebrations have to be observed according to this strict definition there is a time old practice of reckoning the day of Natal Star in the Month of Birth (some reckoning Solar and others Lunar). Let them observe as they like but we shall go to the subject proper. One must know how to erect the Birthday map. There are some spoon-feeding like ready-

made tables as *'Solar Return'* published in some books and Ephemeris. If you work as per strict definition of Solar Return these tables will be found to be far from fact. So my advice is not to resort to those tables. What is a Solar Return? The exact moment when the Sun in his revolution touches the same point as at birth is *Varsha Pravesh.* Treat as if one is born at that moment and cast the chart. That would be the most authoritative Solar Birthday Map for the year under review.

Again here are some side-trackers. Some suggest to cast the chart for the place of then residence. You know that the point of Ascendant varies from place to place for the same moment. Just see how far it is logical. It means that one can go on changing his fate every moment by changing places as apart form Annual Chart there is Monthly Chart (Masa Pravesh) and Day Chart (Dina Pravesh) and similar other charts of minute divisions. This is impossible. If it be so, then how to read in advance the future of those who will be often moving from place to place like an Executive Officer or a Canvassing Agent. My opinion is that it should be always worked out for the Birth place only.

I solve another doubt here. Worked with Sayana Sun, both at Birth and the year of revolution the moment of Solar Return would be different from that worked out from Nirayana positions. By research I bank on only Nirayana calculations. To be successful in this system special care has to be taken to workout the correct position of Sun at Birth as all the future Revolution Maps mainly depend upon this chief factor. You must note that one minute difference in its longitude causes the Lagna to move by about 6 to 7 degrees as Sun takes about a ghati (24 minutes) to move a minute in the Zodiac. If perchance the Lagna be on the margin of a

sign, the sign of Lagna gets changed and the entire readings get topsy-turvy as in a Solar Map the Lagna-Rasi is of major importance for the determination of Varshapa selected by his qualification of aspecting Lagna Rasi. Please note that by referring to wrong Epbemeris or following a wrong Ayanamsha these errors arise. So an efficient Astrologer should be all careful.

Determination of Varshapa (Year Lord)

(1) Lord of Birth Lagna, (2) Lord of Varsha Lagna (Year Lagna), (3) Muntha, (4) Lord of Tri Rasi and (5) Lord of the sign occupied by Sun in Day birth and that of moon in Night birth.

These five are titled as 'Pachadhikaris'. They are the five ministers administering over the Native for the year. Their term of life is only one year. Afterwards they will all retire and some of them may be re-elected in the coming year. But once tbey are elected there is no question of pulling them down by no-confidence or other means as on the material plane. In some years all these five ministers may be independent bodies or sometimes their number may get reduced when one will have more than one portfolio. At any rate we always reckon them as five. Once these five ministers are elected (there is no question of selection here) the immediate duty is to appoint one among them as the chief of cabinet. Naturally it is always desirable to have the strongest of them becoming chief. Thus among the five members (Pachadhikaris) whoever gets the highest strength (by Panchavargi Bala) and aspects Lagna becomes the chief called Varshapa (Lord of the year). During the year the effect of this chief planet will be felt predominantly.

Muntha : In the language of Western Astrology Muntha is no other than the progressed Ascendant at 30^0 (a Rasi) a year. Its point is obtained by adding to the Longitude of Lagna as many Rasis as the number of years have elapsed from birth. The lord of sign in which this point falls is Muntha. It has to be calculated mathematically and not grossly by merely counting Rasis.

Harsha Balam

Details of working out Harsha strength are given in Table 5. Allot 5 Rupas for each of the 4 kinds of Harsha Bala and find out the total Harsha Bala. Even here the maximum is 20 Rupas.

This Harsha Bala should be applied to the Panchadhikaris only as during the year they are the chief part-takers. If they are strong enough both in Varga Bala and Harsha Bala they give very happy results. The good or bad resulting should be judged as in General Astrology.

Year Lord

In fixing up the Year-Lord three conditions are to be satisfied :

(1) He must be one of the Panchadhikaris.

(2) He must aspect Lagna, and

(3) He must be strongest, aspecting (the Lagna) planet among the Panchadhikaris.

So, it follows that not always the strongest of five becomes the lord of the year. If perchance the strongest of them does not aspect Lagna then the next in strength among them that aspects Lagna will be selected. If none

of the five aspects Lagna then *any planet other than these five who aspects Lagna and is the strongest among the rest will be the Year Lord.* If none aspects Lagna take the strongest of the 7.

P.S. : By aspect here I always mean Rasi aspect only. Here I love to break the precedence and say that I prefer to select one who aspects Lagna as per general canons of *Varahamihira* as the Lord of the year. In the absence of such aspects you may then resort to Tajaka Aspects.

In one of the slokas describing the effect of the year Lord, the text says that the year when the Varshapa goes to 6, 8 and 12 from Varsha Lagna would be bad. Commentators are confounded how such a thing can happen when planets in 6, 8 or 12 can never become the Year Lords as they do not aspect lagna. The real sense of it is this. As the primary qualification is Rasi Aspect , we select the most powerful planet aspecting Lagna Rasi as the Year Lord. When the Bhava chart is worked out he may fall in 6, 8 or 12th Bhava. Thus you see the importance of Bhava chart even here.

Bhava Phalam

As there is nothing special here those stated by me in Part-I, may be gone through.

Dasha Phalam

This is the salient part as any one is interested to know the timing of events. Unfortunately the Dasha system narrated in *Tajaka Neelakanti (Heenamsha Pathyamsha)* does not work to satisfaction. I have laboured for more than 20 years with all kinds of Dasha systems and finally come to the conclusion that of all of

them Udu Dasha is the best. Distribute 365 days of Solar Year in the proportions of 6, 10, 7, 18, 16, 19, 17, 7 and 20 (being Udu Dashas of Sun on in years) and they will be spans of Dasha periods in days of Sun onwards to Shukra in order or measured by the progression (Gochara) of Sun they are 18, 30, 21, 54, 48, 57, 51, 21 and 60 degrees respectively i.e., when Sun moves 18^0 in the Zodiac by Gochara the Sun's Dasha rules, Moon Dasha for 30^0, Kuja Dasha 21^0 and so on the total of 360^0 representing a Zodiac.

Just as you work out the balance of dasha at birth from Moon's Radix position, work out for the position of Moon at revolution. You get the balance of Dasha at Revolution followed by the successive Dashas in the order of Udu-Dasha. The Dasha reading has to be done in the usual general way described by me under the chapter on General Dasha Bhukti.

Sahamams

By *Sahamam* is meant particular effects. In the method of locating Sahamam there are two schools-one advocating 'Saikatham' (adding one) and the other discarding 'Saikatham'. By research I belong to the first class of advocacy. If the final additative element is not in the range starting from subtractee to subtractor in clockwise order (the two factors that decide a Sahama) then one Rasi should be added further; otherwise not. For example Vivaha Sahamam; Day and Night its formulae is *(Shukra-Shani) + Lagna.* Here Shukra the top planet is Subtractor and Shani the lower planet is Subtractive. Lagna is final Additative Element. If lagna is not situated within the range starting from Shani to Shukra in clockwise order you must add one Rasi to the above

result. That is (Shukra-Shani) + Lagna + one Rasi. But if lagna be in between the two, no Saikatham. Then (Shukra - Shani) + Lagna only will do.

Timing of these Sahamas

I have tried the method of these Sahamas as stated in Tajaka Neelakanti, but they have all failed. So I have found a way out. Find the lord of the star occupied by Sahama as well the lord of the sign occupied by the Sahama i.e., Sookshma and Sthoola lords of Sahama. During the Dasha periods of these planets the Sahama effects are felt.

How to judge the Sahamas?

For everything judgement of Radix chart has to be made first and then the Revolution map. Unless a Sahama is good at birth it does not become good in any year. Hence, estimate its worth first from Birth chart and then from the Annual chart. A Sahama is good if it falls in good places from the Lagna and its Sthoola and Sookshma lords are well placed. If badly placed they give bad and if mixed they give mixed effects. Likewise you yourself guess the rest of the combinations as per general astrological principles:

For the ready reference of my readers I give below the table of Sahamas. In this table the formula for Day is usually given except in cases where the night birth formula differs. Otherwise you must take it for granted that for night births the formula gets reversed. Only the Subtractee and Subtractor elements get reversed, the third Additative element remaining constant for both. Note also some exceptional differential formula in the case of some Sahamams.
