ॐ New Techniques of Prediction Part III ॐ

This science of Race astrology is based on 3 factors – (1) elementary principles of astrology, (2) alphabetology (Akshara Shastra), and lastly (3) numerology (Sankhya Shastra). There are authors who have dealt with them separately but we have adopted a different method in which we have clubbed all 3 branches for arriving at the judgment. So we are going to describe what are all the fundamentals that one should know under each head.

ॐ_Astrological_aspect_ॐ

Under this head we are not going to deal with more than what is essential to follow this method. So one should not be afraid that because this is based on astrology it would be beyond the hold of a layman. What is needed in this connection is to erect the chart for the day of event and note Lagnas running during the race times. In the following lessons we teach even a layman to be able to follow us. Please read with care.

What is really needed is the positions of planets in Rasi chart and the stars in which they are posited and Lagnas running at each race. For our purposes it is not even necessary to find their exact positions. Those that are able to work out these with the aid of a standard Panchanga may do so. Others will do good to do this with the aid of Lahiri Ephemeris for the year concerned which will be explained in detail hereunder. Those that work with the aid of Raphael's Ephemeris may also do so but convert the positions into Nirayana by subtracting the correct Ayanamsa of the year as followed by Lahiri. We take up one by one in detail and show the way out.

ॐ Calculation of Lagna ॐ

To do this the factors needed are the latitude and longitude of the place of race. Planetary positions are to be calculated for IST while Lagna on LMT of the place. What they are will be explained later. IST is Indian Standard Time which is 5 1/2 hours in advance of Greenwhich Mean Time (GMT) followed all over India.

For the benefit of those who cannot follow the astrological vocabulary we have used in this text we furnish the translations in English.

Grahas (planets)	
Sanskrit	Western
Surya [Ravi]	Sun
Chandr	Moon
Mangal [Kuja]	Mars
Budh	Mercury
Guru	Jupiter
Sukr	Venus
Sani	Saturn
Rahu	Dragon's head
Ketu	Dragon's tail
Lagna	Ascendant
Rasi	Sign

Rasis (signs)	
Sanskrit	Western
Mesha	Aries
Vrisabha	Taurus
Mithuna	Gemini
Karkataka	Cancer
Simha	Leo
Kanya	Virgo
Thula	Libra
Vrischika	Scorpio
Dhanur	Sagittarius
Makara	Capricorn
Kumbha	Aquarius

ॐ To find LMT from IST ॐ

At the rate of 4' for every degree of longitude work out the time of the place. This is the time difference for that place reckoned from Greenwich Mean Time. If this be more than 5 1/2 hours add the difference to the IST to get the LMT of the place, but if this is less than 5 1/2 hours subtract this difference from IST to get the equivalent LMT of the place.

Now refer to the Annual Ephemeris of Lahiri. Note the Siderial Time at Noon LMT on that day as given under Col. 2 under Sid. Time. To this add the LMT got as before for the required race time, This becomes the Sidereal Time in hours and minutes for the race time. Now turn to the Table of Ascendants (Abridged) on page 74 - 75 of Lahiri Annual Ephemeris. Under the Col. nearby the latitude of the place of race look for this Sid. Time and across that Row under Col. I see how many degrees of Lagna and under what Rasi. That becomes Lagna. For our purposes it is enough if you merely note what Lagna is. When it falls at margin then you have to calculate

strictly by proportional methods as will be described later. If you have Lahiri's detailed Table of Ascendants then this becomes easy.

Let us work out a practical case on 04.10.1970 at 02:30 pm IST at Hyderabad whose latitude is 17 N 26 and longitude 78 E 27.

First we have to convert 02:30 pm IST into LMT. Multiplying the longitude of the place 70° 27' by 4' we get 314' as the LMT of Hyderabad in advance of GMT. As IST is 5 1/2 hours in advance of GMT the LMT of Hyderabad is 16 minutes less than IST (330 - 314). So the LMT of Hyderabad is got by subtracting 16 minutes from IST and so LMT of 02:30 pm IST becomes 02:14 pm LMT.

In Col. 2 of Lahiri Ephemeris for 04.10.1970 Sidereal time at noon is given as 12 h 50 m correcting to minutes (omitting the seconds). To this add time elapsed from noon, i.e. 02 h 14 m. We get 15 h 04 m as the Sid. time at race time of 02:30 pm IST.

Now turn to Table of Ascendants on page 74 - 75 of Lahiri Annual Ephemeris. This being an abridged table you have to work out by proportions both for latitude and Sidereal Time. If you possess detailed table you may straightaway look under the said latitude for the required Sid. Time and strike Lagna in a minute. If this abridged table is used work as follows:

As the latitude of Hyderabad falls between 16 N 47 and 18 N 58 for which the details are given here you have to work by proportions Lagnas correspondings to the given Sid. Time and then work out by proportions.

Let us first take up lat. 16 N 47

For Sid. Time of 14 h 47 m

Lagna is 10° Makara

For Sid. Time of 15 h 24 m

Lagna is 20° Makara

So for 37 m Lagna moves by 10°

So for 17 m Lagna moves by 10 × 17 ÷ 37°

(15-4 – 14-47) = 04° 34' (roughly).

Adding this to the position for Sid. Time of 14-47 we get 14° 34' of Makara.

Similarly work out for lat. 18 N 58 when we get 14° Makara as Lagna.

For 16 N 47 Lagna is 14° 34' of Makara

For 18 N 58 Lagna is 14° 00' of Makara

We require for 17° 26'. Working as usual by proportions we get Lagna at 02:30 pm IST at Hyderabad on that day as 14° 17' of Makara. As stated before worked with detailed table it becomes easy.

ॐ Working of Graha's positions ॐ

After finding out Lagna for each race we have to work out the planetary positions as at race times. Except Chandr all Grahas remain in the same Rasi during the course of race time ranging usually between 10 am and 06 pm. It is enough if we work out the positions for some day time say 01:30 pm on the race day or for the time of first race noting of course any changes of any particular Graha during the said hours in its Nakshatra and Rasi positions. In the case of Chandr if there be change the same may be worked out.

ॐ How to work out Graha's positions on 04.10.1970 at 02:30 pm IST ॐ

In this connection we wish to point out that except the position of Lagna the positions of Grahas remain the same at the moment of 02:30 pm IST all over world. So for calculation of Graha's positions we need not bother about the place of race. If you choose to work out their positions from a standard Panchanga of Driganitha you may do so noting Nakshatra Padas of each Graha as that is of importance to us.

If you wish to work out from Lahiri Ephemeris proceed as follows. Lahiri has given the positions of Grahas (longitudes in Rasi-degree-minute) for 05:30 am IST. Starting with this, work out for the required time of race noting the movement of that Graha for the difference of time thus evolved. If the motion is direct add this difference and if retrograde (Vakri) subtract from the position at 05:30 am IST. Then you get the positions for the required time. The difference is got by working out by proportions noting the daily motion of that Graha which can be seen from the two successive days positions. Whether it is direct or retrograde motion may also be seen from them. Of late Lahiri has given True Rahu positions in his Ephemeris while in the previous years he was giving Mean Rahu positions. What we want is Mean Rahu position and this is given once in 10 days on page 30 of his annual Ephemeris. Taking the daily motion of Rahu as 3.18 minutes a day as his average motion work out from the position of the known date given to the day of race by proportional basis. In this way you will be able to cast the positions of all Grahas. As Ketu is situated at 180° apart from Rahu (once Rahu) is known Ketu is automatically known.

Let us now work out Graha's positions at 02:30 pm IST on 04.10.1970.

First of all note the difference of time from 05:30 am IST to 02:30 pm IST which is 9 hours.

Let us first take up the case of Surya. R-D-M

On 05.10.1970 at 05:30 am his position is 05-17-53

On 04.10.1970 05-16-54

The difference gives the daily motion of Surya as 59' a day of 24 hours. So his movement for 9 hours is 59 ÷ 24 × 9 minutes which is roughly 22 minutes. Adding this to the position of Surya at 05:30 am we get the position of Surya at 02:30 pm IST as 5 Rasis 17° and 16' (ignoring seconds). This position is at 17° 17' of Kanya and its Nakshatra is Hasta 3rd Pada whose Nakshatra Lord is Chandr. See later lessons for reading Nakshatra positions and Nakshatra Lords from degrees and minutes positions in Rasis.

In this way work out other Grahas noting of course their direct and retrograde motions. Worked this way the following will be the positions of Grahas.

Surya - 05-17-16; Chandr - 06-26-56; Mangal - 04-26-19; Budh - 05-01-01; Guru - 06-15-18; Sukr - 06-27-13; Sani - 00-28-24

and their Nakshatra Lords in order are:

Ch – Gu – Sk – Sy – Ra – Gu - Sy respectively from Surya on to Sani in order.

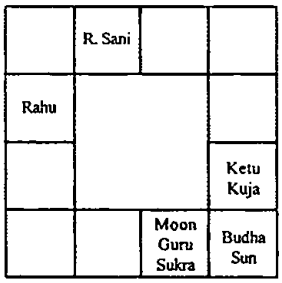

ॐ Working of Rahu and Ketu ॐ

Please refer to page 30 of Lahiri Ephemeris. On 28.09.1970 at 05:30 am his position is 10-07-32. On 04.10.1970 at 02:30 pm the difference is 6 days and 9 hours.

For 6 days at 03-18 a day it works to about 19'.

For another 9 hours it is 1 minute. Thus the motion for the said difference is 20'. As motion of Rahu is always retrograde substract 20' from the position on 28.09.1970 and thus we get Rahu posited at 10 Rasis 07° 12', i.e. at 07° 12' in Kumbha. As Ketu is at 180° from Rahu the position of Ketu is 07° 12' of Simha. Nakshatras of Rahu and Ketu are Shatabhisha 1st Pada and Magha 3rd Pada respectively and their Nakshatra Lords are Rahu and Ketu respectively.

Summing up, the chart as at 02:30 pm IST on 04.10.1970 stands as following:

From SJS 6:

Tabular form of Graha's positions

Graha	Rasi	° & '	Nak. Pada		Nak. Lord

For picking the winners we need the positions of Grahas in Rasis and Nakshatras and again we have to know what each quarter of a Nakshatra represents in terms of **alphabets** (**Nama Nakshatra**). As we are mainly concerned with Nakshatra positions of Grahas it is enough if they are worked out either with the aid of standard Drigganita Panchanga as "Kumbakonam Mutt Viswanatha Swrothy Panchangam" or Lahiri Ephemeris. Those who use Raphael or any other Sayana Ephemeris should get the positions converted to Nirayana using the correct Ayanamsa formulated by Government of India.

ॐ Chapter 2 ॐ

ॐ Nakshatra positions of Grahas ॐ

ॐ worked from Ephemeris ॐ

Nakshatra positions of Grahas are very important for us as the crux of picking up the winners depends mainly on Nakshatra Lords. How Nakshatras are distributed in the Zodiac and how to evaluate from the degree positions the concerned Nakshatras will be explained in these lessons.

ॐ_Distribution_of_Nakshatras_in_Rasis_ॐ

There are 27 Nakshatras running in a particular order from Aswini to Revati. All these 27 Nakshatras are distributed equally and in consecutive order in 12 Rasis of the Zodiac. Thus by 'Rule-of-Three' we get 2 1/2 Nakshatras located in each Rasi. For some convenience each Nakshatra is divided into 4 equal parts called Padas. Thus a Rasi contains 2 1/2 Nakshatras or 9 Padas. The entire Zodiac has **108 Padas** which number is given much importance in the chantings (Astotharam). Next the order:

Starting from 00° of Mesha with Aswini 1st Pada, we have in Mesha - Aswini 4 Padas, Bharani 4 Padas and Krittika 1 Pada, totalling 2 1/2 Nakshatras or 9 Padas. Next Vrishabha Rasi starts with Krittika 2nd, 3rd and 4th Pada, Rohini 4 Padas and Mrigashira 1st and 2nd Pada. Running further in the same order, lastly in Meena Rasi 4th Pada of Purvabhadra, all 4 Padas of Uttarabhadra and all 4 Padas of Revati are situated. Thus you have to note the distribution of Nakshatras. These are fixed Nakshatra positions.

ॐ_How_to_apportion_longitudinal_spans_to_these_Nakshatras?_ॐ

You must know that the longitudinal span of a Rasi is 30°. Distributing these 30° to 9 Padas of a Rasi, we get 03° 20' as the longitudinal span of a Nakshatra Pada. As such 4 Padas constituting a full Nakshatra occupy 13° 20' span in a Rasi. Above is stated the order of Nakshatras in Rasis. Accordingly allot their degree positions. For clearer understanding see the table below:

	Rasis	Nakshatras	Span in ° & '
1)	Mes	Aswini (F)	00-00 to 13-20
		Bharani (F)	13-20 to 26-40
		Kritika (1)	26-40 to 30-00
2)	Vrb	Krittika (2/3/4)	00-0 to 10-00
		Rohini (F)	10-00 to 23-20
		Mrigashira (1/2)	23-20 to 30-00
3)	Mit	Mrigashira (3/4)	00-00 to 06-40
		Ardra (F)	06-40 to 20-00
		Punarvasu (1/2/3)	20-00 to 30-00
4)	Kar	Punarvasu (4)	00-00 to 03-20
		Pushya (F)	03-20 to 16-40
		Aslesha (F)	16-40 to 30-00
5)	Sim	Magha (F)	00-00 to 13-20
		P. Phalguni (F)	13-20 to 26-40
		U. Phalguni (1)	26-40 to 30-00
6)	Kan	U. Phalguni (2/3/4)	00-00 to 10-00
		Hasta (F)	10-00 to 23-20
		Chitra (1/2)	23-20 to 30-00

	Rasis	Nakshatras	Span in ° & '
7)	Tul	Chitra (3/4)	00-00 to 06-40
		Swati (F)	06-40 to 20-00
		Vishaka (1/2/3)	20-00 to 30-00
8)	Vrk	Vishaka (4)	00-00 to 03-20
		Anuradha (F)	03-20 to 16-40
		Jyesta (F)	16-40 to 30-00
9)	Dha	Moola (F)	00-00 to 13-20
		P. Ashada (F)	13-20 to 26-40
		U. Ashada (1)	26-40 to 30-00
10)	Mak	U. Ashada (2/3/4)	00-00 to 10-00
		Sravana (F)	10-00 to 23-20
		Dhanista (1/2)	23-20 to 30-00
11)	Kum	Dhanista (3/4)	00-00 to 06-40
		Shatabisha (F)	06-40 to 20-00
		P. Bhadra (1/2/3)	20-00 to 30-00
12)	Min	P. Bhadra (4)	00-00 to 03-20
		U. Bhadra (F)	03-20 to 16-40
		Revati (F)	16-40 to 30-00

From the above table Nakshatra falling at a particular degree and minute may be worked out. Grahas posited at such places are said to be in that Nakshatra.

ॐ_Nakshatra_Lord_ॐ

Each Nakshatra is ruled by a Graha as per Udu Dasha as stated below. Thus the ruling Graha of a Nakshatra in which a Graha is posited becomes Nakshatra Lord of that Graha.

Nakshatra			Nakshatra Lord
Aswini	Magha	Moola	Ke
Bharani	Purvaphalguni	Purvashadha	Sk
Krittika	Uttaraphalguni	Uttarashadha	Sy
Rohini	Hasta	Sravana	Ch
Mrigashira	Chitra	Dhanista	Ma
Ardra	Swati	Satabisha	Ra
Punarvasu	Vishaka	Purvabhadra	Gu
Pushya	Anuradha	Uttarabhadra	Sa
Aslesha	Jyesta	Revati	Bu

ॐ_Aspects_ॐ

This is also of importance to us and so you should know the system of aspects. All Grahas aspect 7th Rasi from the one occupied by them. In addition, the following are the special aspects to be noted:

Mangal aspects	4 and 8
Guru aspects	5 and 9
Sani, Rahu & Ketu aspect	3 and 10.

ॐ_Rasi_Lords_ॐ

You should first of all know Lord of each Rasi and they are as follows:

Mesha & Vrischika	are ruled by	Mangal
Vrishabha & Tula		Sukr
Mithuna & Kanya		Budh
Dhanus & Meena		Guru
Makara & Kumbha		Sani
Karkataka		Chandr
Simha		Surya
Kumbha		Rahu [co-Lord]
Mesha		Ketu [co-Lord; more common info is Vrischika]

P.S.: Inspite of this easy coaching on the astrological side if anyone feels it difficult to erect the map he may get it done by a local astrologer, and then proceed further on our theory.

For the benefit of laymen who do not know much of astrology we furnish below a ready-made table of Navamsa and Drekkana. Please note the following meanings.

The Roman figures denote the number of Rasis counted from Mesha as 1 is Mesha, 5 is Simha, 12 is Meena and so on. The top row in Roman figures denotes Rasis from Mesha onwards in which we wish to know Amsa parts. The first column is in degrees and minutes in those Rasis. The other columns from top to bottom denote Rasis counted from Mesha where those Amsas fall. For example, to know Drekkana of a Graha situated in Kanya between 10 and 20° see under Roman figure 6 and 2nd row showing No. 10, meaning 10th Rasi counted from Mesha, i.e. Makara and so Drekkana falls in Makara.

Similarly a Graha situated in Mithuna 15° finds its Navamsa in Kumbha as follows:

In Navamsa table in 3rd column find 4th row showing No. 10 which is Kumbha. In this way you can evaluate the two charts with a little practice.

Drekkana table

	Drekkanas											
Till	1	2	3	4	5	6	7	8	9	10	11	12
10-00	1	2	3	4	5	6	7	8	9	10	11	12
20-00	5	6	7	8	9	10	11	12	1	2	3	4
30-00	9	10	11	12	1	2	3	4	5	6	7	8

Table of Navamsa

	Navamsas											
Till	1	2	3	4	5	6	7	8	9	10	11	12
03-20	1	10	7	4	1	10	7	4	1	10	7	4
06-40	2	11	8	5	2	11	8	5	2	11	8	5
10-00	3	12	9	6	3	12	9	6	3	12	9	6
13-20	4	1	10	7	4	1	10	7	4	1	10	7
16-40	5	2	11	8	5	2	11	8	5	2	11	8
20-00	6	3	12	9	6	3	12	9	6	3	12	9
23-20	7	4	1	10	7	4	1	10	7	4	1	10
26-40	8	5	2	11	8	5	2	11	8	5	2	11
30-00	9	6	3	12	9	6	3	12	9	6	3	12

ॐ_Numberology_ॐ

We have our own system of numberals different from the one followed by the West. Still it would be advantageous sometimes to know that too which are as follows:

Graha	Numbers governed
Sy	1 & 4
Ch	2 & 7
Ma [Ke]	9
Bu	5
Gu	3
Sk	6
Sa [Ra]	8

Please remember always that Rahu is like Sani and Ketu like Mangal and so Rahu's No. is 8 while Ketu's No. is 9.

ॐ Chapter 3 ॐ

ॐ Akshara Shastra (Alphabetology) ॐ

The next and the most important item you have to learn is Akshara Nama (alphabetology) of Nakshatra Padas. We have already described that each Nakshatra has 4 Padas and also taught the mode of reading them from the degree positions in Rasis. We now give the alphabets assigned to each quarter.

ॐ_Alphabets of Nakshatra Padas_ॐ

P.S.: In the following it is more the pronounciation that is important than letters as it is the sound that counts more than letters and this can be perfectly stated in Sanskrit letters. When it has to be mentioned in other languages its real consonance should be explained and so when writing it is English we prefer to convey them through sound formed by more than one letter. In such cases it is only the sound formed by that word to be taken into consideration and not the letters. For proper guidance we give also the Sanskrit letters that may always be taken as correct one.

	Nakshatras		Sound of Padas				Devanagari[1]				IAST

[1] Devanagari font and IAST transcription have been added by editor, Chistabo. If you do not know what is this, simply ignore. If you want, you can cross-compare thoroughness of my 'addition' – there is original scan at the end of the document. If you compare 'original' sounds of Padas with IAST you can notice that sounds as given by original author (brilliant (bow!) Mr. Iyer) are mere phonetically expressed original Sanskrit 'letters' – Aksharas.

* This is closest match I could find (Sravana 4th Pada), but I strongly believe it is correct; [Ardra 3rd Pada] is missing from original pdf, this is 'direct translation'. Bear in mind I am only amateur student of Sanskrit.

P.S.: Letters of Abhijit Nakshatra are included under Sravana Nakshatra.

ॐ Some peculiarities in the application of alphabetology ॐ

Under our system of diagnosing the winner we make use of alphabetology and numerology. Alphabetology is used only to find Nakshatra Pada from the initial sound of the name of the horse. Its first letter and its first pronouncement (Uchharana) is important for us irrespective of what other letters of the name of the horse are. For example, for horse named 'Episode' we take its first pronouncement as 'A' [think phonetically] and not the first letter 'E' and so take it as Krittika 4th Pada. For 'Full Try' we take 'Pu' as in Sankrit there is not a letter conveying its real pronounciation and so as Hasta 1st Pada. In some cases the initial and the stressed pronounciation have both to be considered. For horse named 'Fragrance' take 'Pa' first of Uttaraphalguni 3rd Pada and then 'Ra' of Chitra 3rd Pada. For horse named 'Grey' take 'Gay' of Dhanista 4th Pada and 'Ray' of Swati 2nd Pada. In the case of a horse with more than one syllable take all syllables paying more value to the first. For horse named 'Neel Kamal' take 'Nee' ['Ni' actually] of first syllable of Anuradha 2nd Pada and then 'Ka' of Mrigashira 3rd Pada. When unimportant words are prefixed to the names of horses omit them and take only more important ones. They are of the type like 'The', 'Mr.' etc. that preceed the names.

ॐ Chapter 4 ॐ

ॐ Theories of spotting the Winners ॐ

We have so far discussed at length all the fundamentals needed for judgement of a winner in a race. We now go to the subject proper.

I divide this chapter into 4 sections each one dealing with a different theory of spotting the winner, and then finally conclude as to how to use them in toto or in preferrential order.

In a race it is only the **name of the horse** and its **card number** that are prominent both in toto and with the bookies. Mostly it is the card number that predominates. So any rule of detecting the winner should be based only on these 2 factors. As the card number is more prominent as the horse carries its number on its back we **attach more importance to card number** in our tests. In this connection we wish to caution the punters that they always long for a very simple rule understandable by even a layman. If the art was so simple then everyone would have gained and the glamour for race would have stopped. Just to please such punters there have been many simple rules formulated by easy authors with the result the authors having grown richer by the sale of their books while the punters have gone poorer. Be it remembered that any theory that is not based on Heavenly bodies is sure to fall to the ground. Test our theories based entirely on Heavenly bodies though a bit taxing and then see how it works.

As has been said it is with the aid of alphabetology and numerology that we find the winner and that the letter is founded on quite a different principle from what the westerners and their followers use. We count numbers taking account of Rasis counted from Lagna.

If you so desire you may also make use of the western system of numbers provided they also second the first arrived numbers.

Under alphabetology there are 2 methods. One based on Nakshatra Padas that we use in this text and other one based on groups of letters called Vargas which are as follows:

Group	Governed by
Vowels from AA to Aou	Sy
Kavarga (Ka to Gyna)	Ma
Chavarga (Cha to Engna)	Sk
Tavarga (Ta to NNa)	Bu
Thavarga (Tha to Na)	Gu
Pavarga (Pa to Ma)	Sa
Consonants from Ya to LLa	Ch

We have given these only for the sake of knowledge and they have not given full satisfaction in this case and so we leave it there. So alphabetology based on Nakshatra Padas is the one you have to master as at each stage we make use of it.

After stating all the necessary factors we will thereafter take up the spotting of winners by different modes as mentioned before.
